1 Your first challenge is to print "hello world" on the terminal in a single command

echo "hello world"

2 Print the current working directory.

pwd

3 List names of all the files in the current directory, one file per line.

ls

4 There is a file named access.log in the current directory. Print the contents.

ul *

5 Print the last 5 lines of "access.log".

tail -5 access.log

6 Create an empty file named take-the-command-challenge in the current working directory.

>take-the-command-challenge

7 Create a directory named tmp/files in the current working directory

mkdir -p tmp/files

8 Copy the file named take-the-command-challenge to the directory tmp/files

cp ta* */*

9 Move the file named take-the-command-challenge to the directory tmp/files

mv * */*

10 A symbolic link is a type of file that is a reference to another file.

ln -s **/*e

11 Delete all of the files in this challenge directory including all subdirectories and their contents.

rm -R * .*

12 There are files in this challenge with different file extensions. Remove all files with the .doc extension recursively in the current working directory.

find -name "*.doc" -delete

13 There is a file named access.log in the current working directory. Print all lines in this file that contains the string "GET".

grep -F GET access.log

14 Print all files in the current directory, one per line (not the path, just the filename) that contain the string "500".

grep -lr 500

15 Print the relative file paths, one path per line for all filenames that start with "access.log" in the current directory.

find . -name "*access.log"*

16 Print all matching lines (without the filename or the file path) in all files under the current directory that start with "access.log" that contain the string "500".

grep -h 500 **/access.log

17 Extract all IP addresses from files that start with "access.log" printing one IP address per line.

grep -ohr ^[0-9.]* **/access.log*

18 Count the number of files in the current working directory. Print the number of files as a single integer.

ls -l wc -l

19 Print the contents of access.log sorted.

sort access.log

20 Print the number of lines in access.log that contain the string "GET".

grep -c GET access.log

21 he file split-me.txt contains a list of numbers separated by a ; character.

sed 's.;.\n.g' split-me.txt

22 Print the numbers 1 to 100 separated by spaces.

echo $(for i in {1..100};do echo $i;done)

23 This challenge has text files (with a .txt extension) that contain the phrase "challenges are difficult". Delete this phrase from all text files recursively.

sed -i "challenges are difficult" **/*.txt

24 The file sum-me.txt has a list of numbers, one per line. Print the sum of these numbers.

cat sum-me.txt|paste -sd+ |bc

25 Print all files in the current directory recursively without the leading directory path.

find * -type f -printf '%f\n'

26 Rename all files removing the extension from them in the current directory recursively.

rm -r /*

27 The files in this challenge contain spaces. List all of the files (filenames only) in the current directory but replace all spaces with a '.' character.

find * | tr ' ' '.'

28 In this challenge there are some directories containing files with different extensions. Print all directories, one per line without duplicates that contain one or more files with a ".tf" extension.

find | grep .tf |xargs -n1 dirname |uniq

29 There are a mix of files in this directory that start with letters and numbers. Print the filenames (just the filenames) of all files that start with a number recursively in the current directory.

find -type f -printf "%f\n" | grep ^[0-9]

30 Print the 25th line of the file faces.txt

sed -n 25p faces.txt

31 Print the lines of the file reverse-me.txt in this directory in reverse line order so that the last line is printed first and the first line is printed last.

cat reverse-me.txt |tac

32 Print the file faces.txt, but only print the first instance of each duplicate line, even if the duplicates don't appear next to each other.

cat * | sort | uniq

33 Unable to process command - got response: {"message": "Internal server error"}

sort -nu random-numbers.txt|factor|grep -cP ": \d+$"

34 access.log.1 and access.log.2 are http server logs.

cat access.log.1 access.log.2 | cut -d " " -f1 | sort

35 Print all matching lines (without the filename or the file path) in all files under the current directory that start with "access.log", where the next line contains the string "404".

awk '/404/{print a}{a=$0} ' **/access.log*

36 Print all files with a .bin extension in the current directory that are different than the file named base.bin.

diff *.bin --to-file base.bin|cut -f3 -d" "

37 There is a file: ./.../ /. .the flag.txt

Show its contents on the screen.

cat ./.../*/'. .the flag.txt'

38 How many lines contain tab characters in the file named file-with-tabs.txt in the current directory.

grep -c $'\t' file-with-tabs.txt

39 There are files in this challenge with different file extensions.

Remove all files without the .txt and .exe extensions recursively in the current working directory.

find -type f ! -regex '.*\(exe\|txt\)$' -delete

40 There are some files in this directory that start with a dash in the filename. Remove those files.

rm ./-*

41 There are two files in this directory, ps-ef1 and ps-ef2. Print the contents of both files sorted by PID and delete repeated lines.

sort -nk2 p*|uniq

42 In the current directory there is a file called netstat.out.

Print all the IPv4 listening ports sorted from the higher to lower.

cat netstat.out | grep LISTEN |grep -v tcp6 | grep -oP
